Our New Monthly Newsletter

Welcome to the Town of Sackville's inaugural newsletter. The newsletter will be emailed at the beginning of each month with the goal of informing residents of Sackville on important upcoming dates, pressing issues within the Town and other Town-related business.

As a municipality, Council and Staff want to do what we can to keep our residents informed. Although this publication will only include news and updates directly concerning the Town as a municipal unit, we do encourage residents to regularly visit sackville.com's news items, community calendar and frequently asked questions for more timely information. If there is an issue you would like to see addressed in this monthly publication, please send your suggestions to info@sackville.com.

We would like to thank all of the residents of Sackville for everything you do to make our Town an amazing place to live, work and play and we hope you have a safe and happy Holiday Season.

The Sackville Sports Wall of Fame Now Accepting Nominations

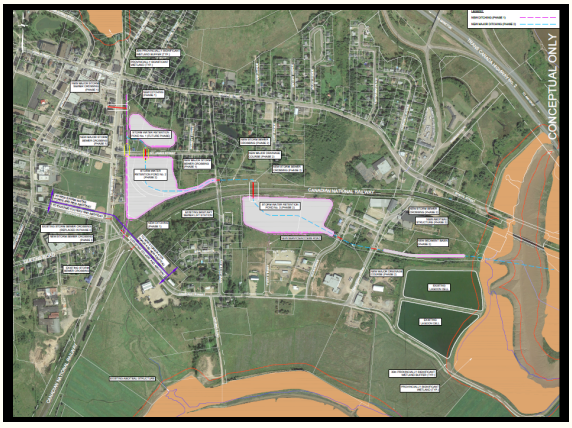

The Sackville Sports Wall of Fame Board of Directors would like to invite the public to submit nominations for consideration to the 2018 class of the Sackville Sports Wall of Fame.

Nominations are being accepted for the following categories: Individual Athletes, Teams, and Builders; and are due on January 12, 2018. Full details and nomination forms can be found on the Sackville Sports Wall of Fame page on Sackville.com.

Lorne Street Update

What a summer! While most of the Phase I work on Lorne Street is now complete, there are a few deficiencies that the contractor will be addressing over the coming weeks. Both Phase I contracts progressed on time and on budget. The Phase I work, valued at over $5.3 million, was funded under the Clean Water and Wastewater Fund and we are grateful to the Federal and Provincial governments for their financial contributions.

The focus is now on Phase II, getting the stormwater from Lorne Street to the Tantramar River. At our public information session on November 1, 2017, we described the engineered design to capture stormwater and store it in large naturalized ponds in and around the Lorne Street and St. James Street area; and a series of large above-grade drainage ditches that will store, transport and discharge stormwater to a new aboiteau structure at the Tantramar River. Presently, our engineering consultant, Crandall Engineering, is working on the detailed design drawings in advance of Phase II going out to tender. We anticipate construction getting underway in early 2018, once the Environmental Impact Assessment process is completed. We will continue to update the public via our website and social media channels, as well as host another public information session once the preliminary design of the stormwater retention ponds is completed.

Lastly, we know that large scale construction projects like this can cause some headaches, so we want to sincerely thank the public and businesses in and around the construction site for their patience and understanding during the project.
